⌂CitRep™

◢INFORMATION LOGISTICS™

CitRep allows transportation agencies to engage in a dialogue with their travelers that increases the operations center's situational awareness. Travelers can report on any number of roadway conditions important to your agency.

Traveler Reporting Mobile App
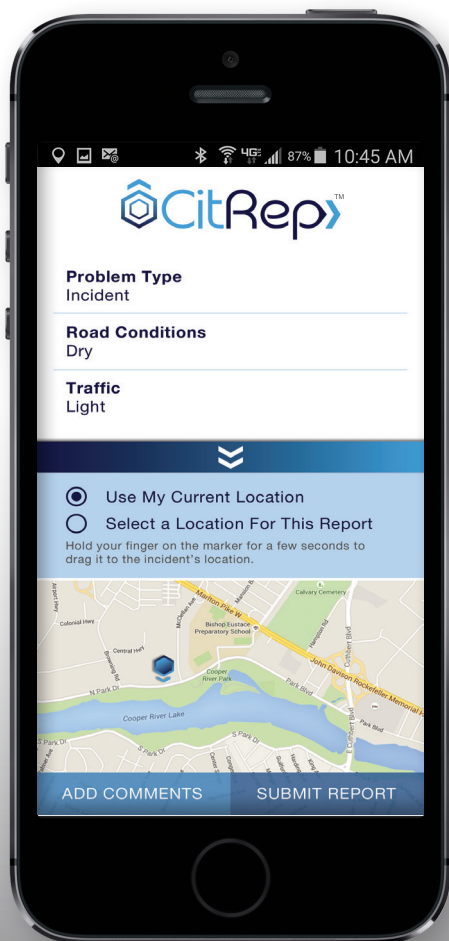

CitRep is a mobile app for Android and iPhone with a simple user interface. It connects to a robust back-end management system that allows operations centers to see what was reported, where it was reported and who submitted the report. Users can report on weather, visibility, snow/ice spots, hazards/incidents, traffic or other *agency-defined conditions*. CitRep can be implemented as a standalone product or integrated as a feature of another mobile app.

CitRep™

TRAVELER REPORTING MOBILE APP WITH AGENCY OVERSIGHT.

Through a convenient web interface, operations center staff can view reports, map individual reports or even blacklist problem users. Staff can receive email alerts when specific types of reports are submitted. CitRep™ can be customized to interface with your ATMS to convert user submitted reports into agency-issued alerts.
