Mobile Maintenance Reporting

Whether at the maintenance shed or on the road, your crews can report conditions. If they don't report, the IVR will automatically call and prompt for roadway reports. The Reports from the Roadcrews™ app and IVR system lets your operations center staff get reliable, timely information from your workforce.

The "Reports" system tracks the weather, roadway temperature and condition, as well as visibility and roadway maintenance actions taken – as reported by your maintenance crews.

Information can be reported via web, mobile app or call-in to an IVR system, providing a hands-free, eyes-free reporting method.

ROAD CREW REPORTING APP & IVR

Operations center staff can schedule call-outs to maintenance workers. The system will call their mobile phones and walk them through the IVR responses – eliminating the need for busy work crews to remember to periodically submit their reports.

No matter which method of reporting is used, all reports are managed by your operations staff with the same administrative interface. The system can be customized to integrate with your ATMS system – converting road crew reports into traveler alerts with a single click.
